

UNITED STATES OF AMERICA
FEDERAL ENERGY REGULATORY COMMISSION

Interconnection of Large Loads to the Interstate
Transmission System

Docket No. RM26-4-000

COMMENTS OF ORACLE AMERICA, INC.

Oracle America, Inc. (Oracle) appreciates the opportunity to comment on the proposed advance notice of proposed rulemaking that the Secretary of Energy released for consideration and final action by the Federal Energy Regulatory Commission (Commission).¹ In the *AI Action Plan*, the White House recognized that “[t]he United States is in a race to achieve global dominance in artificial intelligence (AI).”² One of the most significant and widespread delays Oracle encounters when siting data centers in the United States is access to sufficient energy. Oracle welcomes this opportunity to explore ways to address access to energy so that we can support the Administration’s efforts to accelerate AI – and all the significant benefits it will yield, including greater efficiency, improved safety and reliability, expanded access to services, and enhanced economic competitiveness.³

Oracle is unique as both a developer and operator of AI infrastructure and AI applications. Oracle’s product and service offerings are at the forefront of AI innovation, providing the interoperable, intelligent platform necessary to deploy AI at scale. Oracle is enabling the training of AI models and facilitating AI reasoning on both public data and privately

held data, such as the information in Oracle’s databases.⁴ Our products and services include enterprise applications and infrastructure offerings that are delivered worldwide through a variety of flexible and interoperable IT deployment models. To avoid single points of failure, Oracle’s AI applications and its cloud services allow access to multiple data centers in multiple locations. With exponentially increasing demand for applications incorporating AI into their functionality, data storage, and transfer, bringing more locations online is therefore critical for both resiliency and capacity.

Deploying AI at scale requires building and powering data centers at scale to develop, train, deploy, and house AI applications. Secretary Wright correctly identified that “all Americans and domestic industries [must] have access to affordable, reliable, and secure electricity.”⁵ AI is emerging as a key domestic industry, crucial to America’s national and economic security. The Administration can materially bolster U.S. AI dominance by streamlining processes, freeing up time and resources, and incentivizing growth for infrastructure deployment both in the United States and in trusted partner/allied nations abroad.⁶

The Commission should support efforts to streamline administrative procedures and harmonize standards related to load sheds and down time. Interconnection, while important, is

⁴ Oracle, *Larry Ellison Keynote on Oracle’s Vision and Strategy: Oracle AI World 2025*, YOUTUBE (Oct. 14, 2025), <https://www.youtube.com/live/4eCFmbX5rAQ>; see also Oracle, *Clay Magouyrk Keynote on Building the Cloud for You: Oracle AI World 2025*, YOUTUBE (Oct. 15, 2025), <https://www.youtube.com/watch?v=fR9ooQGVa98> (affirming that Oracle’s Oracle Cloud Infrastructure’s goals are to deliver the highest performance, lowest cost, and most secure infrastructure possible and to be available wherever customers need the cloud); Oracle, *Mike Sicilia Keynote on Oracle AI Powering Your Business: Oracle AI World 2025*, YOUTUBE (Oct. 14, 2025), <https://www.youtube.com/watch?v=CVF5CsDW9pU> (“[Oracle is] delivering trusted AI that’s transforming organizations in every industry”).

⁵ Letter from Chris Wright, Secretary of Energy, to David Rosner, Chairman, *et al.*, FERC, at 1 (Oct. 23, 2025), <https://www.energy.gov/sites/default/files/2025-10/403%20Large%20Loads%20Letter.pdf>.

⁶ See *Comments of Oracle America, Inc.*, Docket No. OSTP-TECH-2025-0067 (Oct. 27, 2025). Among other things, certain reforms related to backup power generation would materially accelerate AI infrastructure deployment.

just one piece of the regulatory puzzle that entities seeking to power a data center must solve. Oracle encourages the Commission to examine processes and regulations in ways to encourage speed to decision making generally. For example, the Commission could explore imposing decision shot clocks on its own cases. Shortening longer comment periods and limiting intervenor and reply comment rounds to a single round will allow for public participation without creating a heckler's veto. Likewise, the Commission could explore ways to streamline backstop permitting procedures. With respect to the notice of proposed rulemaking in response to Secretary Wright's letter, the Commission could explore ways to address pain points that stem from the patchwork of regulations and practices around the country. For example, the Commission could encourage ways to harmonize load shedding practices as well as downtime calculations.

Winning the AI race with an American tech stack requires powering data centers here in the United States and abroad as fast as possible. The Commission can assist in this effort by acting on Secretary Wright's letter, streamlining its processes, and harmonizing key standards.

Respectfully Submitted,

ORACLE AMERICA, INC.
