|---------------------------------------------------------------------------------|-------------|------------------------------|

**SUPPLEMENTAL COMMENTS OF  
THE ENTERGY OPERATING COMPANIES**

Entergy Services, LLC (“Entergy Services”), on behalf of the Entergy Operating Companies,<sup>1</sup> hereby submits these brief Supplemental Comments as the Commission considers the Department of Energy’s advance notice of proposed rulemaking regarding the interconnection of large loads. Entergy Services is submitting these Supplemental Comments to provide new information that has arisen since it submitted Reply Comments on December 5, 2025, namely, Entergy Corporation’s recent announcement that approximately 2.3 million customers in Arkansas, Louisiana, and Mississippi will receive approximately \$5 billion in total savings because of data center customer agreements in those states. Entergy Services will also discuss laws and guidance in Entergy Operating Company regions that are designed to attract and interconnect large loads in these regions, including actions taken since the time Entergy Services submitted its Reply Comments.

As Entergy Services explained in its Initial and Reply Comments, the existing retail regulatory frameworks in the Entergy Operating Companies’ service territories include efficient rules for attracting and interconnecting large loads, and which provide for significant input from

<sup>1</sup> The Entergy Operating Companies are Entergy Arkansas, LLC (“Entergy Arkansas”), Entergy Louisiana, LLC (“Entergy Louisiana”), Entergy Mississippi, LLC (“Entergy Mississippi”), Entergy New Orleans, LLC, and Entergy Texas, Inc.

retail regulators.<sup>2</sup> This framework includes a number of recent statutes and actions taken by retail regulators:

- Most recently, on February 25, 2026, the Louisiana Public Service Commission (“LPSC”) adopted non-binding guidelines for the interconnection of large loads that are intended to ensure that the interests of all customers are protected and balanced. The guidelines are a list of criteria the LPSC will apply to determine whether the resources needed to serve a new large load addition are in the public interest. They thus provide a roadmap for a utility to consider in structuring a transaction with a large load customer.
- In 2025, the Arkansas Legislature passed Act 373, known as the Generating Arkansas Jobs Act. Act 373 is designed to help Entergy Arkansas and other utilities attract large commercial customers. The statute allows Entergy Arkansas to build the infrastructure needed to support new large load growth, while keeping power affordable and reliable. This allows Entergy Arkansas to attract new large customers that will pay their fair share and put downward pressure on rates.
- In January 2024, the Mississippi Legislature passed SB 2001 during the Second Extraordinary Session. That statute provides tax incentives and infrastructure support for large-scale economic development projects.

Under this framework, starting in 2024 the Entergy Arkansas, Entergy Louisiana, and Entergy Mississippi regions saw the arrival of data center projects by five major technology companies:

- AWS announced two campuses in Madison County, Mississippi, in January 2024.
- AWS announced a third campus in Warren County, Mississippi, in November 2025.
- Meta announced a campus in Rayville, Louisiana, in December 2024.
- Avaio Digital announced a campus in Rankin County, Mississippi, in August 2025.
- Avaio Digital announced a campus in Little Rock, Arkansas, in January 2026.
- Google announced a campus in West Memphis, Arkansas, in October 2025.

---

<sup>2</sup> *E.g.*, Entergy Initial Comments at 8; Entergy Reply Comments at 6.

- Hut 8 announced a campus in West Feliciana Parish, Louisiana, in December 2025.

Entergy expects continued success in attracting and interconnecting large loads on a going forward basis.

The successful attraction of these loads will provide significant benefits to retail customers. On March 4, 2026, Entergy Corporation announced that approximately \$5 billion in total savings will accrue to 2.3 million customers in Arkansas, Louisiana, and Mississippi because of data center customer agreements in those states. This includes more than \$2 billion in savings for Mississippi customers, \$1.7 billion in savings for Arkansas customers, and \$800 million savings for Louisiana customers. Customer savings are projected over the next 20 years, and come after the regulatory approval or acknowledgement of the public service commissions in those states.

In light of the successes in Entergy Operating Company regions, evidence does not support Commission action in those regions. If the Commission nonetheless does take any action, it should recognize that the Entergy Operating Companies' respective public service commissions provided the collaboration, oversight, and direction needed to achieve the successes discussed above. It should take care to avoid any rule that could interfere with successful existing state processes.
