The Honorable Laura Swett, Chairman
The Honorable David Rosner, Commissioner
The Honorable Lindsay S. See, Commissioner
The Honorable Judy W. Chang, Commissioner
The Honorable David A LaCerte, Commissioner

Federal Energy Regulatory Commission
888 First Street, NE
Washington, DC 20426

Re: Secretary of Energy's Direction that the Federal Energy Regulatory Commission Initiate Rulemaking Procedures and Proposal Regarding the Interconnection of Large Loads Pursuant to the Secretary's Authority Under Section 403 of the Department of Energy Organization Act

Dear Chairman Swett and Commissioners,

The American Chemistry Council (ACC) appreciates the opportunity to comment on the *Advance Notice of Proposed Rulemaking regarding the Interconnection of Large Loads*. Chemical manufacturing relies on highly reliable and competitively priced electricity, and many future facilities will require transmission-level interconnection in order to expand or modernize operations to meet the increasing demands driven by AI, Data Center, and domestic manufacturing.

Electricity demand in the United States is rising and is projected to accelerate over the next five years due to data center growth, and increases in domestic manufacturing. Current practices for connecting large loads to the transmission system vary across regions and often create uncertainty for project timelines and upgrade responsibilities.

Chemical manufacturing underpins the semiconductor and artificial intelligence supply chain by providing the critical materials, process chemicals, and infrastructure inputs required for chipmaking and modern data center development. Ensuring reliable electricity access for these facilities is essential to maintaining U.S. competitiveness in advanced technologies.

ACC appreciates the Department of Energy & the Commission's leadership on this topic and looks forward to participating in future rulemaking proceeds. Should you have any questions please feel free to contact [Trevor Balough@americanchemistry.com](mailto:Trevor_Balough@americanchemistry.com).

Respectfully,

Trevor Balough

Trevor Balough
Director, Energy & Climate
