Docket No. RM26-4-000

**REPLY COMMENTS OF THE OKLAHOMA ATTORNEY GENERAL’S OFFICE AND
OKLAHOMA CORPORATION COMMISSION**

On November 7, 2025, the Secretary of Energy (“Secretary”) issued a Notice Granting Extension of Time allowing reply comments to be filed by December 5, 2025, in the captioned docket. The Oklahoma Attorney General’s Office (“Oklahoma AG”),¹ and the Oklahoma Corporation Commission (“OCC”) submit the following reply comments to the State Entities’ “Comments of the Undersigned Attorneys General and State Consumer Advocates” filed on November 21, 2025 (“State Entities”).²

The Oklahoma AG and OCC would like to endorse the comments of the State Entities. To the extent possible, the Oklahoma AG and OCC agree that (1) jurisdiction, and (2) ratepayer

¹ The Attorney General of the State of Oklahoma (“Oklahoma AG”), by statute, is Oklahoma’s consumer advocate and embraces the opportunity “[t]o represent and protect the collective interests of all utility consumers of this state in rate-related proceedings before the Corporation Commission or in any other state or federal judicial or administrative proceeding.” 17 O.S. § 18b(A)(21) (2025).

² The State Entities are the Massachusetts Attorney General’s Office (“Massachusetts AGO”), the Arizona Attorney General’s Office (“Arizona AGO”), the Colorado Attorney General’s Office (“Colorado AGO”), the Connecticut Office of Consumer Counsel (“CT OCC”), the Maryland Office of People’s Counsel (“MPC”), the Minnesota Attorney General’s Office (“Minnesota AGO”), the Office of the Nevada Attorney General, Bureau of Consumer Protection (“Nevada BCP”), the New Hampshire Office of the Consumer Advocate (“NH OCA”), the Oregon Attorney General (“Oregon AG”), and the Rhode Island Division of Public Utilities and Carriers (“Rhode Island DPUC”).

protections should guide the Commission in this rulemaking. The Oklahoma AG and OCC acknowledge the difficulty and magnitude of how to add large loads efficiently and reasonably. They recognize this issue is especially complex in light of the myriad efforts being made by state legislatures to address the same issues as this rulemaking at the federal level. Given this difficulty, the Oklahoma AG and the OCC decided to endorse the State Entities' comments because of the careful discussion related to the jurisdictional boundaries that need to be respected to maintain state and regional transmission organization ("RTO") integrity, and the ratepayer protections that the Commission must consider.

Similar to the concerns raised in the State Entities' Section 1 "Jurisdiction," the Oklahoma AG would like to restate the complexity of Oklahoma's regulatory apparatus to help "avoid *even arguably* affecting the States jurisdiction' over the distribution system by limiting this rulemaking to interconnections directly to transmission facilities."³ As explained by the OCC and Oklahoma AG in their initial comments dated November 21, 2025, the State of Oklahoma is addressing several complicated regulatory changes: growing demand from large loads; requirements for integrated resource planning; requirements for All-Source Request for Proposals; statutory provisions for preapproval of generation projects; newly enacted behind-the-meter legislation; recent regulatory action to create a large load tariff by July 1, 2026; newly enacted legislation for transmission projects to attain a certificate of authority; and the Southwest Power Pool's ("SPP") response to growing demand from large loads. The above list only addresses Oklahoma, and the Oklahoma AG and OCC echo the State Entities' comment that any Commission rulemaking here should not impede that progress or prevent other regions from making similar progress.

³ ANOPR, at ¶ 4.

Last, the Oklahoma AG supports the State Entities' comment addressing ratepayer protections. At this time, the OCC has not had a meaningful opportunity to make findings of facts, conclusions of law, tariff or rule changes that fit Oklahoma's unprecedented load growth. However, maintaining the jurisdictional boundaries will allow Oklahoma to explore the protections described in Section 2 "Ratepayer Protections," as well as the recent regulatory actions by Oklahoma's neighbors that share jurisdictional utilities with Oklahoma. Along with the State Entities, the Oklahoma AG and OCC believe that the items described in Section 2 should reduce the cost and reliability impact of large loads connecting directly to the transmission system and can serve as key protections for ratepayers in the wake of current and anticipated future load growth. Likewise, the Commission should consider expanding the scope of this rulemaking to consider additional load flexibility mechanisms that can similarly alleviate the peak demand burden on ratepayers.

CONCLUSION

The Oklahoma AG and OCC would like to thank the Commission for the detailed explanation about the need for "potential reforms to ensure the timely and orderly interconnection of large loads to the transmission system."⁴ The Oklahoma AG and OCC appreciate the Commission's attention to this matter and its solicitation of public input on the development of rules and processes to facilitate interconnections of large loads to the transmission system.

Respectfully Submitted,

Thomas L. Grossnicklaus
