| Interconnection of Large Loads to the<br>Interstate Transmission System | )<br>)<br>) | Docket No. RM26-4-000 |
|-------------------------------------------------------------------------|-------------|-----------------------|

**SUPPLEMENTAL COMMENTS OF  
THE MISO TRANSMISSION OWNERS**

The MISO Transmission Owners<sup>1</sup> submit these supplemental comments in response to the Notice Inviting Comments issued by the Federal Energy Regulatory Commission (“Commission”) in the above-captioned docket on October 27, 2025, regarding the Advance Notice of Proposed Rulemaking released by the Secretary of Energy (“Secretary”) on October 23, 2025.<sup>2</sup> The MISO Transmission Owners are submitting these

---

<sup>1</sup> The MISO Transmission Owners for this filing consist of: Ameren Services Company, as agent for Union Electric Company d/b/a Ameren Missouri, Ameren Illinois Company d/b/a Ameren Illinois and Ameren Transmission Company of Illinois; American Transmission Company LLC; Big Rivers Electric Corporation; Central Minnesota Municipal Power Agency; Citizens Electric Corporation; City Water, Light & Power (Springfield, IL); Cleco Power LLC; Cooperative Energy; Dairyland Power Cooperative; Duke Energy Business Services, LLC for Duke Energy Indiana, LLC; East Texas Electric Cooperative; Great River Energy; GridLiance Heartland LLC; Hoosier Energy Rural Electric Cooperative, Inc.; Indiana Municipal Power Agency; Indianapolis Power & Light Company d/b/a AES Indiana; Lafayette Utilities System; MidAmerican Energy Company; Minnesota Power (and its subsidiary Superior Water, L&P); Montana-Dakota Utilities Co.; Northern Indiana Public Service Company LLC; Northern States Power Company, a Minnesota corporation, and Northern States Power Company, a Wisconsin corporation, subsidiaries of Xcel Energy Inc.; Northwestern Wisconsin Electric Company; Otter Tail Power Company; Prairie Power, Inc.; Republic Transmission, LLC; Southern Illinois Power Cooperative; Southern Indiana Gas & Electric Company (d/b/a CenterPoint Energy Indiana South); Southern Minnesota Municipal Power Agency; Wabash Valley Power Association, Inc.; and Wolverine Power Supply Cooperative, Inc.

<sup>2</sup> *Interconnection of Large Loads to the Interstate Transmission System*, Advance Notice of Proposed Rulemaking, Docket No. RM26-4-000 (Oct. 23, 2025) (“ANOPR”); *see Interconnection of Large Loads to the Interstate Transmission System*, Notice Inviting Comments, Docket No. RM26-4-000 (Oct. 27, 2025). The

comments to ensure that the Commission has the most up-to-date information as it relates to the interconnection of large loads regarding the Midcontinent Independent System Operator, Inc. (“MISO”) region as it considers the ANOPR.

As stated in our prior comments,<sup>3</sup> the MISO Transmission Owners strongly support the ANOPR’s goals of interconnecting large loads in a timely and reliable manner that avoids unfair cost shifts. The MISO Transmission Owners have long been committed to ensuring a robust transmission system and facilitating and maintaining resource adequacy in the region. The MISO Transmission Owners, like the current Administration, are acutely aware that *both* transmission and generation are vital to ensuring resiliency, reliability, and affordability and have worked to advance the development of both to support load integration.<sup>4</sup> Although this long-term commitment has positioned the MISO region to support new large loads, the MISO Transmission Owners acknowledge that more can, and should, be done to ensure that the MISO region can speed up large load integration

---

Secretary issued the ANOPR pursuant to section 403 of the Department of Energy Organization Act, directing the Commission to initiate rulemaking procedures to consider the ANOPR and its potential reforms for the interconnection of large loads to the transmission system. ANOPR at P 1 & n.1 (citing 42 U.S.C. § 7173).

<sup>3</sup> See Initial Comments of the MISO Transmission Owners, Docket No. RM26-4-000, at 3 (Nov. 21, 2025) (“MISO Transmission Owners Initial Comments”).

<sup>4</sup> See, e.g., *Removing Barriers to American Leadership in Artificial Intelligence*, The White House (Jan. 23, 2025), <https://www.whitehouse.gov/presidential-actions/2025/01/removing-barriers-to-american-leadership-in-artificial-intelligence/> (“Executive Order 14179”); see *Winning the Race: America’s AI Action Plan*, The White House (July 2025), <https://www.whitehouse.gov/wp-content/uploads/2025/07/Americas-AI-Action-Plan.pdf> (“America’s AI Action Plan”); *Accelerating Federal Permitting of Data Center Infrastructure*, The White House (July 23, 2025), <https://www.whitehouse.gov/presidential-actions/2025/07/accelerating-federal-permitting-of-data-center-infrastructure/>.

and play its part in maintaining our national security, economic prosperity, and scientific leadership.<sup>5</sup> To that end, the MISO Transmission Owners provide this update on our continuing efforts, and progress, to improve the speed to power for large loads.

Since filing our earlier comments in this proceeding, the MISO Transmission Owners have continued working to facilitate the interconnection of large loads in the MISO region. As discussed in more detail below, the MISO Transmission Owners continue to utilize MISO’s open, transparent, and streamlined Expedited Project Review (“EPR”) process to review and approve urgent transmission projects to serve load, including large loads, fastest than the regular MISO Transmission Expansion Plan (“MTEP”) cycle. In addition, the MISO Transmission Owners are active participants in several MISO stakeholder initiatives specifically designed to improve speed to power for large loads while ensuring reliability, including consideration of a new Zero-Injection Generator Interconnection Agreement (“ZGIA”) and new reliability requirements regarding large loads, both of which are discussed below.

Bear in mind that these efforts are not the whole picture. As highlighted by the Edison Electric Institute (“EEI”) in its recent comments<sup>6</sup> to the Commission and the comments of the Entergy Operating Companies,<sup>7</sup> various stakeholders in the MISO region continue to work together to integrate loads timely and reliably without other customers

---

<sup>5</sup> See, e.g., Executive Order 14179; America’s AI Action Plan at 1, 14-16.

<sup>6</sup> Comments of Edison Electric Institute, Docket No. RM26-4-000 (Mar. 12, 2026) (“EEI Supplemental Comments”) (providing a detailed chart of large load projects and tariffs as of March 2026).

<sup>7</sup> Supplemental Comments of the Entergy Operating Companies, Docket No. RM26-4-000 (Mar. 16, 2026) (“Entergy Supplemental Comments”).

“footing the bill.”<sup>8</sup> As EEI highlights, publicly announced data centers and other large load projects continue to be developed in partnership with investor-owned electric companies across the country, including MISO Transmission Owners.<sup>9</sup> EEI also highlights the vital work occurring at the state level, including MISO-member states, in approving or considering pending tariffs that ensure large load customers pay their fair share.<sup>10</sup> Similarly, the Entergy Operating Companies, who are transmission owners in MISO, highlighted the recent announcement that approximately 2.3 million customers in Arkansas, Louisiana, and Mississippi will receive approximately \$5 billion in total savings because of data center customer agreements in those states.<sup>11</sup> In addition to those savings and after filing its supplemental comments, Entergy Louisiana, on March 27, 2026, announced an additional agreement with Meta to support the hyperscale data center in Northeast Louisiana. That agreement is expected to deliver approximately \$2 billion in

---

<sup>8</sup> See, e.g., *Ratepayer Protection Pledge*, The White House (Mar. 4, 2026), <https://www.whitehouse.gov/releases/2026/03/ratepayer-protection-pledge/> (“As that infrastructure grows and the related electricity demand increases, the American people should not be footing the bill for the benefit of private companies.”).

<sup>9</sup> For example, the chart included in the EEI Supplemental Comments includes projects being developed with the following transmission owners in MISO: AES Indiana, Ameren Missouri, Duke Energy Indiana, Entergy Arkansas, Entergy Louisiana, Entergy Mississippi, Montana-Dakota Utilities, Northern Indiana Public Service Company, Otter Tail Power Company, Xcel Energy (Northern States Power Company, a Minnesota corporation). EEI Supplemental Comments, Attachment (Large Load Projects and Tariffs (March 2026)).

<sup>10</sup> The EEI Supplemental Comments list large load tariffs for MISO members in the following states: Indiana, Iowa, Michigan, Minnesota, Missouri, Montana, North Dakota, and Wisconsin. EEI Comments, Attachment (Large Load Projects and Tariffs (March 2026)).

<sup>11</sup> Entergy Supplemental Comments at 1.

additional customer savings to Entergy Louisiana customers over twenty years.<sup>12</sup> As the MISO Transmission Owners and MISO explained in previous comments,<sup>13</sup> the MISO states, transmission owners, load serving entities (“LSEs”), and load owners play lead roles in managing and interconnecting loads, including large loads, and these Supplemental Comments further demonstrate their effective collaboration.

The MISO Transmission Owners urge the Commission to keep this evidence top of mind as it considers whether and how to act with respect to the ANOPR, as not all regions are the same when it comes to interconnecting large loads. As the Commission itself has highlighted, “unlike Eastern [Regional Transmission Organizations (“RTOs”)], the MISO region is largely comprised of traditional obligation-to-serve utilities *without restructured retail markets*,” a composition which “enables LSEs and regulators in the region to undertake longer-term commitments to generation resources, either in the form of direct construction by incumbent LSEs or through comparable long-term contracts.”<sup>14</sup> This composition, where states play the primary role in resource adequacy, has long been an advantage in maintaining affordability in the face of rapidly rising demand, and

<sup>12</sup> *Entergy Louisiana Announces a New Agreement with Meta that Will Deliver an Additional \$2B in Customer Savings*, Entergy (Mar. 27, 2026), <https://www.entergy.com/news/entergy-louisiana-announces-a-new-agreement-with-meta-that-will-deliver-an-additional-2b-in-customer-savings>.

<sup>13</sup> *See, e.g.*, MISO Transmission Owners Initial Comments at 5-6; Comments of the Midcontinent Independent System Operator, Inc., Docket No. RM26-4-000, at 2-4 (Nov. 21, 2025) (“MISO Comments”).

<sup>14</sup> *Midwest Indep. Transmission Sys. Operator, Inc.*, 153 FERC ¶ 61,229, at P 111 (2015) (emphasis added). Illinois and part of the state of Michigan are the only retail choice jurisdictions in MISO.

continues to be.<sup>15</sup> In addition, as the MISO Transmission Owners and MISO have pointed out,<sup>16</sup> the interconnection of load to the transmission system, regardless of size, is largely a matter of state jurisdiction in MISO and as such, the transmission owner and LSEs play lead and important roles in managing and interconnecting load to the transmission system even before MISO is involved. And this makes sense given the areas of exclusive state authority.<sup>17</sup> As MISO pointed out, it does not have the first-hand knowledge of its members' or states' circumstances and priorities in developing economic opportunities associated with large loads and any new rules that would attempt to bypass MISO states and MISO members could have the unintended result of making interconnections "more costly, ineffective, and more time consuming," which clearly runs counter to the ANOPR's

---

<sup>15</sup> *Retail Rate Trends in the US*, Charles River Associates, 16 (Feb. 2, 2026), <https://media.crai.com/wp-content/uploads/2026/02/02092628/Retail-rate-trends-in-the-US.pdf> ("Because the cost of the market purchases is passed through to customers on a dollar-for-dollar basis," customers of investor-owned utilities in the Northeast that do not own generation are "exposed to changes in wholesale rates more than customers of vertically integrated utilities, whose ownership of generation generally serves as a hedge against market volatility."); *id.* at 21.

<sup>16</sup> *See* MISO Transmission Owners Initial Comments at 5; MISO Comments at 2.

<sup>17</sup> Recently, the Commission reiterated that: (1) states have authority over their generation resource mix, including through their siting authority, which means that which generating facilities are sited and allowed to serve co-located load is also a question of state law; (2) states have exclusive authority over the specific terms of retail sales and retail rate design, including how the costs of interstate wholesale sales and transmission of electricity assigned to a wholesale customer are allocated among that wholesale customer's retail customers; (3) states have exclusive authority over wholesale sales that are not in interstate commerce; and (4) states have the exclusive authority through state franchise laws to regulate which entities may make retail sales within their borders, and thus the states determine which entities are legally permitted to provide electricity to retail customers in co-location arrangements. *PJM Interconnection, L.L.C.*, 193 FERC ¶ 61,217, at PP 167-69 (2025), *notice of denial of reh'g by operation of law & providing for further consideration*, 194 FERC ¶ 62,089 (2026).

goals and the goals of this Administration.<sup>18</sup> That is why we agree with EEI regarding “the importance of crafting federal policies that build upon, rather than disrupt” these existing practices of coordination between the transmission owners, LSEs, and loads.<sup>19</sup>

To be clear, the MISO Transmission Owners welcome any and all support from the Commission that avoids a “one-size-fits-all” approach and provides flexibility and encourages Federal Power Act section 205 filings to craft innovative solutions that optimize regional differences in achieving timely, reliable, and affordable speed to power. Doing so will ensure that the region’s finite time and resources are used to focus on solutions that efficiently, reliably, and fairly integrate new large load in the region.

## **I. SPEED TO POWER**

Since filing our earlier comments in this proceeding, the MISO Transmission Owners have continued working at the state and federal levels to ensure that speed to power is more than an aspirational slogan.<sup>20</sup> The MISO Transmission Owners recognize that more can be done in pursuit of accelerating speed to power and as described below, the MISO Transmission Owners continue to make use of every tool in the existing toolbox, as well consider additional reforms and participate in various MISO-stakeholder initiatives specifically geared to identifying new tools for integrating load timely and reliably.

<sup>18</sup> MISO Comments at 20.

<sup>19</sup> EEI Supplemental Comments at 2.

<sup>20</sup> *See, e.g., 2026 Reliability Imperative Report*, Midcontinent Independent System Operator, Inc., 2 (Feb. 2026), <https://cdn.misoenergy.org/2026%20Reliability%20Imperative%20Report744320.pdf> (“Updated long-term planning scenarios, queue reforms and the Expedited Resource Addition Study accelerate ‘speed to power’ by reducing study times and moving critical projects into service faster.”); *id.* at 11-12 (broader discussion of various initiative and their progress).

## **A. Transmission**

In pursuing additional reforms to accelerate speed to power, it is important to evaluate tools that would speed up transmission development for large load integration, as large load timelines are often driven by economic development, national security, and technological imperatives. Creating streamlined processes and ensuring the ability of transmission owners to act expeditiously are just a few examples of the tools that are critical to achieving the ANOPR's objectives.

### **1. Proactive Long Range Transmission Planning**

It is no secret that the sooner long range, backbone transmission is built the faster generation and load can come online. Transmission serves as the critical conduit connecting load with generation. Regional transmission, in particular, is key to supporting interstate energy transfers, providing economic value through least-cost energy procurement, bolstering regional reliability, and supporting the integration of generation and load. Since its inception, MISO and its members have recognized and worked to realize these benefits.<sup>21</sup> Since 2003, MISO's MTEP has "guided the approval of more than 6,800 total projects and upgraded or added nearly 79,000 miles of transmission infrastructure, with over 10,000 miles of transmission line additions or improvements planned."<sup>22</sup> In fact, the Commission has specifically recognized MISO's regional

---

<sup>21</sup> When ten transmission-owning public utilities first applied to the Commission to form MISO, one of the five notable benefits of MISO for market participants was its "large scale regional coordination and planning of transmission." *Midwest Indep. Transmission Sys. Operator, Inc.*, 84 FERC ¶ 61,231, at 62,140, *order on reh'g*, 85 FERC ¶ 61,372 (1998).

<sup>22</sup> *MTEP25 Executive Summary*, Midcontinent Independent System Operator, Inc., 1 (Dec. 11, 2025), <https://cdn.misoenergy.org/MTEP25731615.zip> (follow document titled "MTEP25 Executive Summary.pdf" in zip file).

transmission planning process as an example of proactive transmission planning that has resulted in clear and quantifiable benefits for customers.<sup>23</sup>

Most recently, in MISO's MTEP21 and MTEP24,<sup>24</sup> approximately \$33 billion of long-range transmission projects were approved. MTEP24 alone supported 115.7 gigawatts ("GWs") of resource enablement and 3,631 miles of 345 kV and 765 kV transmission backbone.<sup>25</sup> MTEP25, which was approved by MISO's Board of Directors in December of 2025, supported 11.6 GW of large load additions, most of which were submitted through the EPR process, discussed below.<sup>26</sup>

## **2. MISO's EPR Process**

The MISO Transmission Owners have continued to utilize the EPR process in Section I.D.1.c of Attachment FF to the MISO Open Access Transmission, Energy and

<sup>26</sup> *MTEP25 Report*, Midcontinent Independent System Operator, Inc., 35 (Dec. 11, 2025), <https://cdn.misoenergy.org/MTEP25731615.zip> (follow document titled "MTEP25 Report.pdf" in zip file) ("MTEP25 Report").

Operating Reserve Markets Tariff (“Tariff”) to allow for the addition of urgent transmission projects to serve load. As explained in our previous comments, the EPR process is an open, transparent, and streamlined process that permits MISO to review and approve transmission projects proposed by transmission owners faster than the regular MTEP cycle, which can take years to review and approve transmission upgrades. While the EPR process typically takes about three months,<sup>27</sup> the EPR process can yield study results in as little as thirty days.<sup>28</sup> In short, the EPR process enables the MISO Transmission Owners to connect large loads more quickly.

So far in 2026, MISO has approved EPR projects supporting 10.7 GW of new load additions and currently an additional 9.7 GW are under review.<sup>29</sup> This is in addition to the forty-nine EPR projects accounting for 9.7 GW of load MISO received and evaluated during the 2025 MTEP cycle alone.<sup>30</sup>

<sup>30</sup> *Id.*; MTEP25 Report at 35.

## **B. Generation**

### **1. ERAS**

The Expedited Resource Addition Study (“ERAS”) process, which was approved by the Commission in July 2025, is designed to fast-track needed new generation to meet growing load. On March 9, 2026, MISO announced the third cycle of projects to be evaluated under the ERAS process.<sup>31</sup> This cycle includes fifteen projects totaling approximately 8 GW of proposed new capacity and features a mix of natural gas resources and battery storage spread across MISO’s North, Central, and South regions. MISO states that all projects are expected to be in service by 2031 or earlier. Since the program launched, “53 projects representing nearly 27 GW of proposed capacity have been accepted or are pending validation into ERAS” and “[t]en have already advanced to completed generator interconnection agreements [(“GIAs”)], with an additional 15 projects nearing completion.”<sup>32</sup>

### **2. JTIQ**

The MISO Transmission Owners supported the filing by MISO, together with Southwest Power Pool, Inc. (“SPP”), to implement the Joint Targeted Interconnection Queue (“JTIQ”) framework, which enables MISO and SPP to develop a portfolio of backbone network upgrades to facilitate the interconnection of over 28 GW of generation

---

<sup>31</sup> *MISO Accelerates Resource Additions with Third ERAS Cycle*, Midcontinent Independent System Operator, Inc. (Mar. 9, 2026), <https://www.misoenergy.org/meet-miso/media-center/2026---news-releases/miso-accelerates-resource-additions-with-third-eras-cycle/>.

<sup>32</sup> *Id.*

near the seam between the RTOs to serve load in both regions.<sup>33</sup> As of this filing, the JTIQ Dashboard shows 66.409 GW of generation in the interconnection queue subject to JTIQ. The generator interconnection customers, which range from coal and gas to solar and wind facilities, represent *over two times* JTIQ Portfolio #1’s megawatt (“MW”) threshold for full subscription. As of this filing, GIAs totaling approximately 688 MWs have already been signed in MISO.<sup>34</sup> Although not all projects will necessarily become a part of the final JTIQ Commitment Group for the JTIQ review year ending April 2026, it is noteworthy that interconnection customers in the current interconnection queues already exceed the capacity of the entire JTIQ Portfolio #1 just one-and-a-half years after implementation of the JTIQ framework.

### C. New MISO Initiatives

While more can be done, currently, multiple initiatives are making their way through MISO’s stakeholder process. Below is a summary of two such stakeholder initiatives. The MISO Transmission Owners strongly support MISO’s efforts to think creatively to improve speed to power for large loads.

---

<sup>33</sup> *Midcontinent Indep. Sys. Operator, Inc.*, 189 FERC ¶ 61,108 (2024), *order on reh’g*, 191 FERC ¶ 61,231 (2025), *appeals pending sub nom. Arkansas Public Service Commission v. FERC*, Nos. 25-60127 (5th Cir. Mar. 17, 2025).

<sup>34</sup> *See JTIQ Dashboard*, Midcontinent Independent System Operator, Inc. & Southwest Power Pool, Inc., <https://app.powerbigov.us/view?r=eyJrIjoiaMDZkMWZkOGEtNzNjMy00MDU0LWI4YjUtNmZjMjdIMzFiZW11IiwidCI6IjYwNDA5MTViLTlkZmYtNGQ0Ny1iYjM1LTlhYzljOWE1ZGMxOCJ9> (last visited Apr. 3, 2026).

## **1. Defining “Large Load” and Related Interconnection Reliability Requirements.**

Because large loads can have a disproportionate impact on system reliability due to their size and unique characteristics, MISO is pursuing the development of reliability requirements related to the integration of large loads, including defining a “large load.” Consistent with our Initial Comments regarding the Second Principle of the ANOPR, the MISO Transmission Owners generally support a definition that avoids a threshold based solely on the MW size of the load and instead provides reasonable flexibility in defining large loads, given the technical experience and judgment that is required to appropriately and reasonably weigh operational, reliability, and administrative factors that are critical to defining large loads. Currently, MISO expects to file Tariff revisions including such new requirements in June 2026.<sup>35</sup>

## **2. ZGIA**

MISO is discussing with stakeholders its proposal for a ZGIA for generation co-located with load. The Third Principle of the ANOPR recognized that siting a large load near or at the same point of interconnection as a new generating facility could reduce the network upgrades needed to interconnect only the load or only the generating facility. MISO’s proposed ZGIA is specifically designed with that goal in mind. The ZGIA would allow a generator to serve load directly but grants no interconnection service. The proposed ZGIA process leverages existing interconnection frameworks in terms of study aspects,
