UNITED STATES OF AMERICA
BEFORE THE
FEDERAL ENERGY REGULATORY COMMISSION

Midcontinent Independent System Operator, Inc	**)**	**Docket No. ER27-25-000**

COMMENTS ON BEHALF OF THE SOUTHERN REGULATORS IN SUPPORT OF MISO APPLICATION

Pursuant to Rule 212 of the Commission's Rules of Practice and Procedure[1], and the Commission's October 2, 2026, notice in the above-captioned docket, the Mississippi Public Service Commission and the Louisiana Public Service Commission (together, the Southern Regulators) hereby submit comments in support of the Midcontinent Independent System Operator, Inc.'s ("MISO's") filing to establish the Large Load Addition Resource Study ("LARS"). The LARS proposal seeks to revise MISO's Open Access Transmission, Energy, and Operating Reserves Markets Tariff to establish a process to enable load and generation to be studied together. The LARS proposal also is intended to address the Commission's June 18, 2026 Show Cause Order finding that MISO's Tariff may be unjust and unreasonable because it does not provide generator interconnection study procedures and services that account for serving electrically proximate Large Loads.

The Southern Regulators support MISO's filing to establish the LARS process and respectfully request that the Commission accept it. It is designed to coordinate and expedite the analyses needed to interconnect large loads above 200 MW and the new generation resources identified to support that new load. The LARS process may also reduce overall interconnection costs and provide more certainty for interconnection customers.

[1] 18 C.F.R. § 385.212.

Large Loads are seeking interconnection with the MISO system in ever increasing numbers. Studying these loads along with the generation that is planned to serve those loads may reduce the need for and the costs of transmission upgrades that might otherwise needed if only the generation or only the load were interconnecting. LARS provides for a 120-day parallel study of eligible large loads and their paired generation resources.

LARS should be accepted by the Commission because it is just and reasonable. By studying load and its paired generation together, MISO can identify combined transmission solutions, avoid duplicative and costly upgrades, and produce an outcome in approximately 120 days. This is not currently possible across the separate MISO transmission interconnection transmission study processes. Making LARS a permanent process is reasonable because it provides certainty needed to site and finance large load-and-generation pairings. LARS is a reasonable response to and aligns with the requirements of the Commission's Show Cause Order.[2]

LARS limits the total number of projects studied in a year to ensure that MISO can administratively support the new process; it allows no more than ten generation/load pairs per study period to be evaluated, and allows for only three study periods per year.[3] MISO's tariff revisions propose eligibility requirements that deter speculative interconnection requests and not interfere with the normal DPP process, including a 150% generation to load ceiling, a $250,000 deposit, a three-year commercial operation date, and a same-Local-Resource-Zone requirement.[4]

[2] Show Cause *Midcontinent Independent System Operator, Inc*., 195 FERC ¶ 61,212, (issued June 18, 2026) (Docket No. EL26-70-000) ("Show Cause Order") at P 113.
[3] MISO Transmittal at 9.
[4] *Id*. at 10, 28.

MISO's proposal is transparent, competitive, fuel agnostic, and it does not adversely affect DPP participants.[5] It is non-discriminatory and serves a legitimate public purpose.

Therefore, the Southern Regulators respectfully request that the Commission accept MISO's LARS filing.

Respectfully submitted,

/s/ William D. Booth
